Market Trends & Impact on Fund Performance

CABEI Central American Fund

Central American and Caribbean fixed income securities posted a slightly positive return in February 2011 while Latin American debt lost 0.5% last month. The CABEI Central American Fund lost 0.1%, driving year-to-date performance to 0.28%. Costa Rica was the best performing credit (1.1%), followed by Guatemala (0.4%). El Salvador and Dominican Republic traded almost flat. Argentina and Colombia turned out to be the worst performing countries with returns of -1.4% and -1.1%, respectively. Panama and Mexico lost 0.4% each. Turning to local markets, Mexican bonds as well as the peso hardly moved in February. The current political turmoil in the Middle East and North Africa weighs on overall risk sentiment. However, the underlying trend of investors showing continued interest in Emerging Markets Fixed Income remains intact.

Deutsche Americas Bond Fund

Latin American bonds lost 0.5% in February 2011 while Central American and Caribbean bonds posted a slightly positive return last month. The Deutsche Americas Bond Fund lost 0.3%, driving year-to-date performance to -0.04%. Trinidad & Tobago, Costa Rica and Chile were the best performing credits, followed by Venezuela and Guatemala. El Salvador, Dominican Republic and Brazil traded almost flat. Argentina was hit hardest but Colombia, Uruguay and Peru also lost between 1.1% and 0.7%. Turning to local markets, Mexican bonds as well as the peso hardly moved in February. The Colombian peso depreciated by about 2%, local bonds fell by 0.2%. The current political turmoil in the Middle East and North Africa weighs on overall risk sentiment. However, the underlying trend of investors showing continued interest in Emerging Markets Fixed Income remains intact.

Notes

- The inclusion of collateralised Brady Bonds and floating rate notes in the Emerging Markets Funds managed by DWS necessitate the use of an extended set of risk characteristics defined hereafter.
 - The **Average Yield to Maturity** is the portfolio's average return based on its interest income, capital gains, or capital losses inclusive of its collateral cash flows.
 - Modified duration** is the percentage price change of the portfolio for a given change in average yield. The higher the modified duration, the higher the portfolio's risk.
 - Interest rate duration** is the percentage price change of the portfolio for a given change in the U.S. Treasury par curve. The higher the interest rate duration, the higher the portfolio's exposure to changes in US interest rates.
 - Spread duration** is the percentage price change of the portfolio for a given change in sovereign spread, i. e. the average yield spread of the sovereign's bonds over the U.S. spot curve. Unlike interest rate duration, spread duration only changes the discount rates applied to non-collateralised cash flows. The higher the spread duration, the higher the portfolio's exposure to changes in Emerging Markets credit risk.
 - The **Average Rating** is calculated excluding cash positions.
 - Country Allocation** refers to country / business risk of the security, not to the country of issuance (of importance for offshore issues).
